#### **DETAILED ACTION**

## **Drawings**

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the magnetic body and an electrical conductor must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Application/Control Number: 10/542,006

Art Unit: 2852

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claim 12 and 21 are rejected under 35 U.S.C. 102(e) as being anticipated by Sekiguchi et al. (2003/0086736A1).

Sekiguchi et al. teaches an image heating apparatus comprising: a rotatable ring-shaped heat-producing medium that produces heat through action of magnetic flux; a magnetic flux generation section that is located in proximity to a first peripheral surface of said heat-producing medium and generates magnetic flux that acts upon said heat-producing medium; a temperature control section that controls said magnetic flux generation section and maintains a temperature of a surface of said heating medium in contact with a heated medium at a predetermined temperature; said calorific value distribution adjuster having an electrical conductor opposite said magnetic flux generator ([0060-0082]; the fixing roller is conductive, wire 15, etc).

## Allowable Subject Matter

4. Claim 23 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 1-9, 11, 13-20, 22, and 24 are allowed.

## Response to Arguments

Application/Control Number: 10/542,006 Page 4

Art Unit: 2852

Applicant's arguments filed 8-1-2007 have been fully considered but they are not persuasive. Applicant argues that claim 12 recites the calorific value distribution adjuster having an electrical conductor opposite said magnetic flux generator and that this feature is not taught, disclosed nor rendered obvious by the SEKIGUCHI et al. disclosure. In this regard, and in discussing the calorific value distribution adjustment section, the Examiner makes reference to paragraphs [0060] through [0082] of SEKIGUCHI et al. However, none of the above-noted paragraphs make any mention of, nor otherwise disclose, teach nor render obvious a calorific value distribution adjuster that comprises an electrical conductor opposite the magnetic flux generator as disclosed in the present application, inter alia, at page 50, lines 7-17.

However, there are several conductive elements near the magnetic flux generator. Applicant has not depicted this conductor and it is unclear if applicant teaches this conductive elements. The conductive member near the magnetic flux generator can be any conductive material near the generator.

Finally, applicant has removed the term ring shaped from the claims but his arguments are not persuasive. The specification does not use the term "ring-shape" and that is why the examiner objected to this term. The claims remain rejected as discussed above.

## **Contact Information**

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Quana M. Grainger whose telephone number is 571-272-2135. The examiner can normally be reached on 8am-6pm.

Art Unit: 2852

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Gray can be reached on 571-272-2119. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
